SUMMARY OF QUALIFICATIONS

Software Engineer specializing in Frontend development with React and TypeScript, experienced in scalable products for high-traffic marketplaces. Hands-on experience building AI-powered applications across frontend and backend with AWS Bedrock, plus SEO, Core Web Vitals and conversion optimization.

TECHNICAL SKILLS

React, TypeScript, JavaScript, Next.js, HTML5, CSS3, Kotlin, GraphQL, REST APIs, PostgreSQL, AWS, Micro-frontends, Core Web Vitals, SEO, Design Systems, AI-Assisted Engineering.

EXPERIENCE

Software Engineer at Grupo OLXDec 2024 – Present

As a Software Engineer on OLX's real estate domain, I build experiences for one of Brazil's largest real estate marketplaces — spanning AI-powered products, SEO, conversion and web performance — working closely with Product, Design and Engineering.

- Rebuilt B2B landing pages on Next.js 16 and Strapi with a reusable component library, raising design-system adoption from 30% to 62.5%.
- Found and patched a critical RCE vulnerability in the deploy pipeline and contributed to the team's broader push that cut production error rate to 0.22% and incidents by over 60% year-over-year.
- Improved the reliability of a client-facing analytics dashboard — fixing data issues at the database and ETL level — helping drive a 122% increase over its revenue target.
- Owned end-to-end delivery of a new product line for real estate developers in the primary market — building the front end in React and driving cross-team alignment on a new Kotlin-based backend API — contributing to the vertical beating its annual conversion target (102% of goal).
- Built an AI-powered WhatsApp assistant (AWS Bedrock, Transcribe, Kotlin) that automated first-contact customer service for real estate agencies, doubling user engagement in four months — messages from 9K to 20K, conversations from 4K to 7K.

Front-End Software Engineer at ED3 DigitalNov 2022 – Nov 2024

At ED3 Digital, I built and maintained e-commerce storefronts for fashion and beauty brands in Brazil — including Tommy Hilfiger, Creamy and Skelt — owning frontend features end-to-end, from Figma handoff to deployment.

- Built responsive, high-performance storefronts on React, TypeScript and VTEX IO across multiple fashion and beauty e-commerce brands.
- Translated Figma designs into accessible, production-ready interfaces for desktop and mobile.
- Optimized existing codebases for performance and maintainability, working across the full lifecycle from implementation to deployment.

AWARDS

- **1st Place — OLX Internal Hackathon:** Developed an AI-powered solution for Trust & Safety, winning 1st place among participating teams.
- **3rd Place — Claude Impact Lab, Rio de Janeiro (2026):** Developed an AI-powered solution using real-world public safety data provided by the State Secretariat of Public Security.

EDUCATION

- **Postgraduate Specialization in Software Engineering** — PUC Minas, Brazil (2025)
- **Bachelor's Degree in Design** — Universidade Veiga de Almeida, Brazil (2018); one-year government-funded exchange in International Game Architecture & Design, NHTV Breda (Netherlands), 2013–2014.

LANGUAGES

Portuguese (Native), English (Fluent).
